

peerVue To Introduce *qiVue*TM & next generation *caseVue*TM at SIIM 2007

Burlington, VT—peerVue, LLC, provider of niche healthcare software solutions, announces the debut of *qiVue*TM and the next generation of *caseVue*TM at SIIM 2007. peerVue's much anticipated QI management solution *qiVue*TM, will premiere with peerVue's ground-breaking Magnetic Integration technology. The company's teaching file and content management solution *caseVue*TM has been redesigned from the ground up to even more effectively meet the needs of today's teaching institutions. *caseVue*TM and *qiVue*TM share the power of Magnetic Integration and are compatible with any PACS. The peerVue solutions will be demonstrated with full integration to both the AMICAS and Fuji PACS systems in the peerVue booth at SIIM 2007.

"The peerVue team is poised to provide the buzz at this year's SIIM with the introduction of qiVue and revolutionary magnetic integration with PACS," said Kyle Lawton, peerVue president and CEO, *"qiVue delivers a solution to healthcare organizations to exceed ACR peer review, JCAHO Critical Test Results and other quality and communications related requirements in Radiology."*

This year marks peerVue's fifth appearance at SIIM (formerly SCAR Annual Meeting) and is the most highly-anticipated yet. The peerVue booth will be located directly across from the AMICAS display booth XXXX
